11 March 1965

MEMORANDUM FOR: Assistant Director for Current Intelligence

**SUBJECT : First Day's Look at Keyhole Mission
1017-2, 3-6 March 1965**

1. The second package of Mission 1017, like the first, was largely free of cloud cover. The two packages, 26 February - 2 March and 3 - 6 March, have obtained complete or nearly complete coverage of 21 out of the 25 ICBM complexes. The photographic quality ranged from poor to good.

2. In addition to ICBM installations, this second package of 1017 gained useful photography of Soviet areas and some other targets not covered by 1017-1. The Tallinn defense complex was photographed but we understand that a heavy haze obscured details.

3. The readout on 1017-2 began yesterday and may be completed today. If it is, a preliminary assessment will be provided tomorrow morning.
